

Press release

Schüsckhe Solid Solutions presents a wide range of products at the Aircraft Interiors Expo 2015

Kirchentellinsfurt, 02.03.2015 – From 14-16 April 2015 the Aircraft Interiors Expo will be taking place in Hamburg – one of the most important trade fairs of the aircraft industry for cabin interiors. Schüsckhe will be showing a range of its products from the sanitary and hygiene sector.

Schüsckhe Solid Solutions is constantly working to improve its products and services and adapt them to the permanent customer demands. At booth 6B108 in hall B6, Schüsckhe will present its latest developments for lavatories in the aircraft industry. Among others, the following themes will be shown:

World of colors

The lavatory washbasins are made of the solid surface material Varicor®. A wide range of different colors are available, but individual and special requirements can also be met. No matter which color the customer would like to have the world of colors comply with these requests.

Heat release

More airlines would like to have Varicor® countertops instead of aluminum in galleys. In these places safety requirements are more narrowly defined than in lavatories. Schüsckhe Solid Solution are currently developing a new heat release composite system which will fulfill the high safety requirements of the Federal Aviation Administration (FAA) and the Joint Aviation Requirements (JAR). Therefore, it has been necessary to develop a new Varicor®-formula.

With this project, the company is demonstrating once again its holistic project management.

Light on demand

Should information only to be seen if needed? With light on demand, Schüsckhe offers many methods of turning on or off important information inside the lavatories or galleys.

Glass bowl

Schüsckhe has extended its product portfolio in the area of washbowls: Apart from the existing washbowls made from Varicor® or stainless steel, a new one made from glass is now available. The design is ideal for the First Class area. At the same time, it is equipped with all necessary quality standards to allow certification in accordance with aircraft specifications.

We look forward to welcoming you to our stand and showing you Schüsckhe's innovative solutions.
